AMENDMENTS TO THE ABSTRACT

heat exchangers are manufactured so that the double walls (5, 6) should comprise (5a, 5b) are connected and sealed to each other around the port holes of the exchanger. This is obtained thereby that the said by providing areas (5a, 5b) that are shaped such so as to comprise include areas not covering each other. The brazing is this established provided by capillary suction of brazing material from other plate areas.
